

# Artificial Insemination

With donor sperm (AID)

clínica  
**eugin**

[www.eugin.co.uk](http://www.eugin.co.uk)

**This technique offers a certified chance of pregnancy, of up to 63%**

## Diagnosis and start of treatment

This first process lasts between 2 to 3 hours

### 1 Stimulation

The ovaries are stimulated with hormones so follicles can be produced.

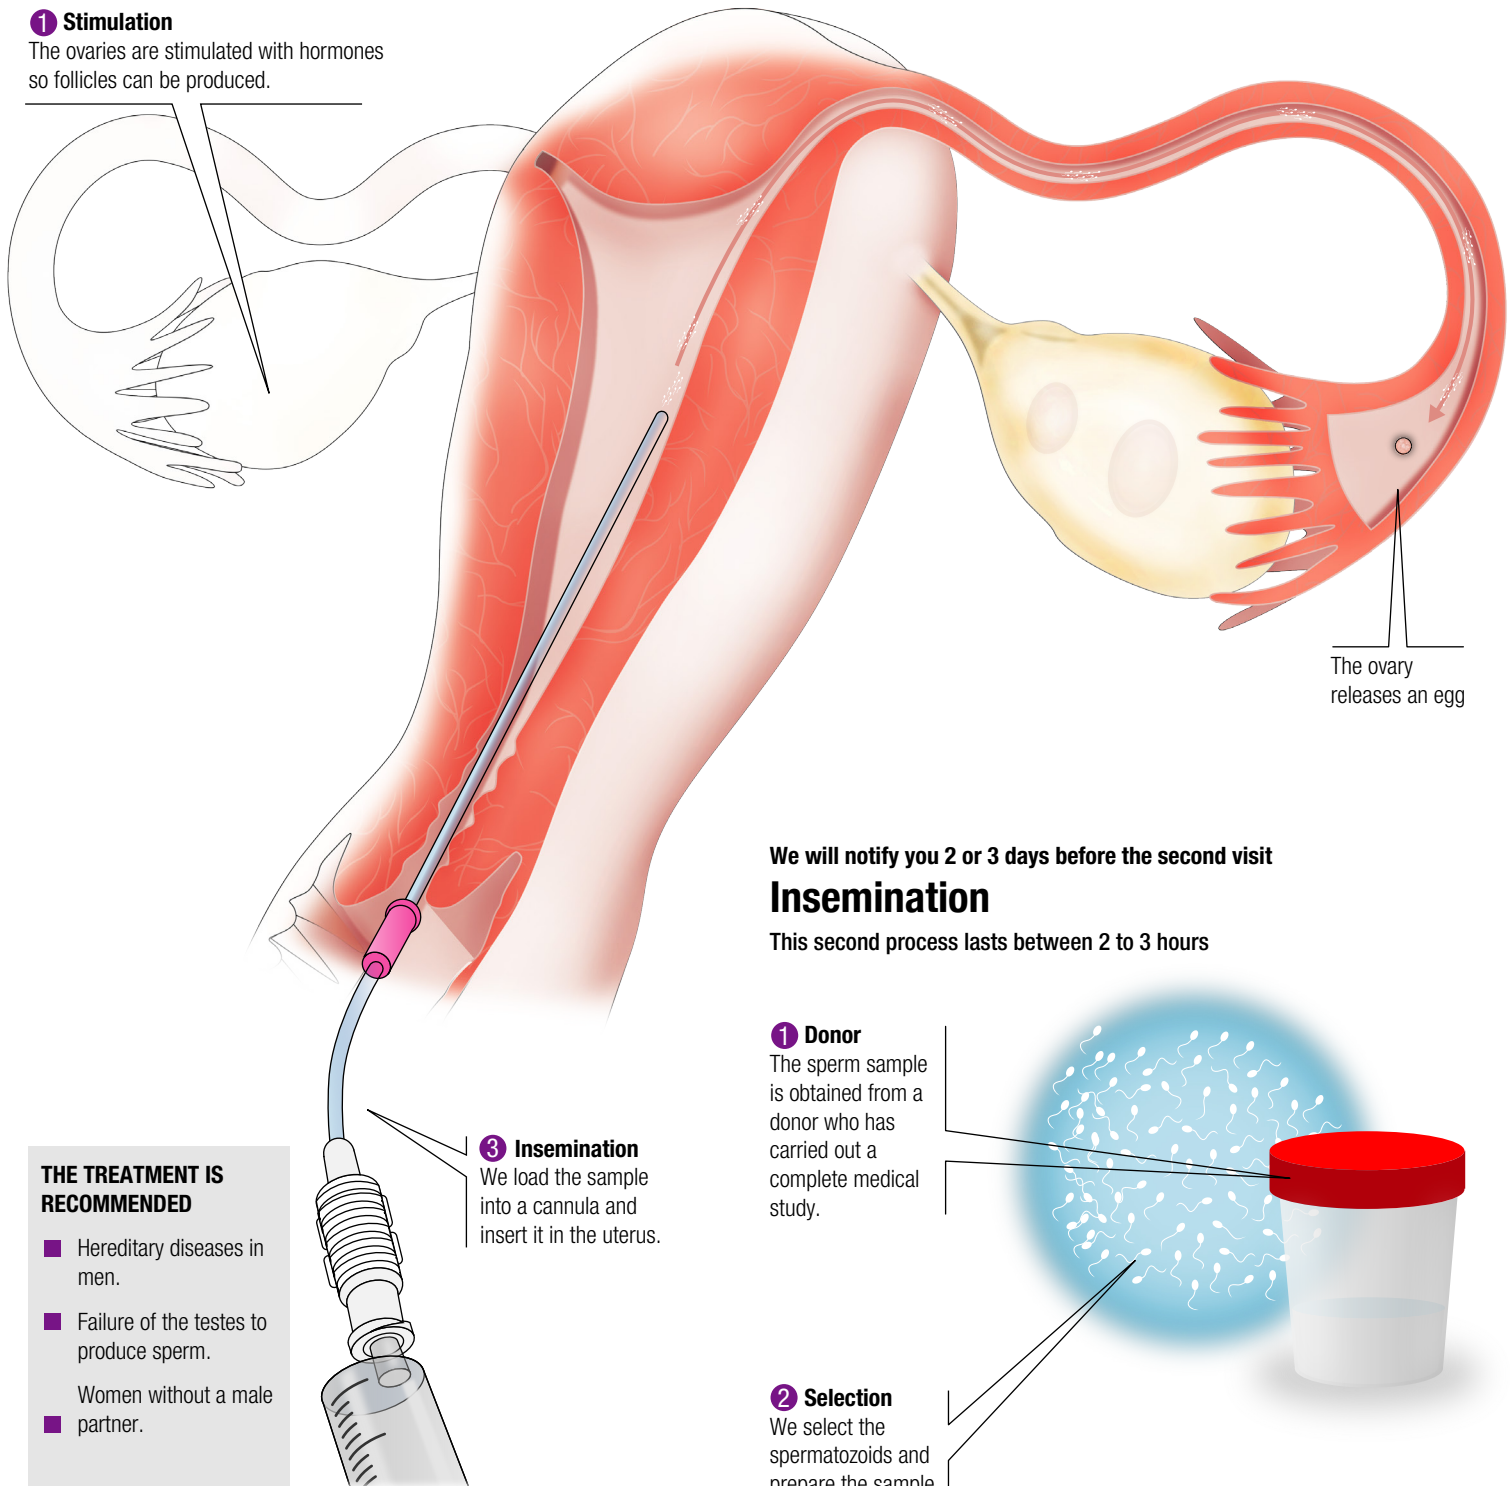

### 2 Control

Through ultrasounds we can control that the size and quantity of each follicle is adequate.

### 3 Egg release

Through the intake of another hormone we trigger the egg release.

We will notify you 2 or 3 days before the second visit

## Insemination

This second process lasts between 2 to 3 hours

### 1 Donor

The sperm sample is obtained from a donor who has carried out a complete medical study.

### 2 Selection

We select the spermatozooids and prepare the sample.

### THE TREATMENT IS RECOMMENDED

- Hereditary diseases in men.
- Failure of the testes to produce sperm.
- Women without a male partner.
